

*Come Join Christina Morse  
for the “W” Walk;  
Wildflowers, Woods and Water.*

*Chris will share the special nature of the Quinault rainforest by looking at the current wildflowers in bloom. The wildflowers, as part of the temperate rainforest, share a community with the surrounding trees such as the Western Red Cedar and shrubs such as the Salmonberry. These plant communities flourish because of the water that flows through this special area along the northwest Coast of North America.  
May 23/24, 2009, 10AM both days.*

*Expect Chris to discuss wildflowers, woods and water  
from an ecological perspective.  
There is no charge for this program-Everyone is welcome.*
